## DATASHEET

## Risk Advisory Services

### What do we do?

SureCloud Risk Advisory delivers a suite of pragmatic and integrated cyber, risk and advisory services, underpinned by the SureCloud Platform, that provides its customers with confidence and assurance that their cybersecurity posture is defined and managed, enabling organisations to operate effectively and efficiently.

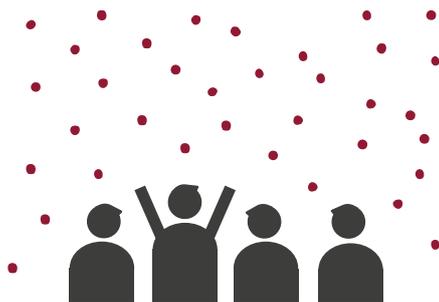

### How do we do it?

Our service is uniquely underpinned by the SureCloud Platform, ensuring that clients have continued visibility of their security programs and initiatives, clear access to management information and the ability to address issues immediately rather than waiting for the delivery of lengthy reports.

### The team

SureCloud's Risk Advisory team comprises consultants with many years of experience across a range of industries, including both public and private sectors. We have specifically recruited individuals with a wide range of experience to ensure that we can work with clients to address their problems whether they be technical, cultural, risk-based, privacy-based, or policy and procedure driven.

An attribute shared by all of our consultants, however, is their ability to understand cybersecurity and risk from a business perspective which allows them to work closely with our clients to translate these into business risks with business-driven resolutions. As such, SureCloud Risk Advisory is comfortable working at operational, tactical and senior executive levels.

## We are proud to hold the following accreditations:

in association with

# The Services

## Assessment and Baselining:

It can be difficult for organisations to gain a holistic understanding of their current cybersecurity posture and risk landscape, due to the evolving complexity of an organisation's operating environment, compliance requirements and geographical challenges. SureCloud Risk Advisory offers a range of services to support organisations in assessing and baselining their environment(s) against industry best practice, understanding and prioritising those areas which are most critical in achieving their business objectives.

## Information Assurance and Governance:

Organisation's struggle to keep abreast of the evolving security landscape, especially when security resources are in demand. SureCloud Risk Advisory offers a range of services to help bridge these gaps and deliver pragmatic solutions which enable the ongoing management of compliance requirements through its SureCloud Platform automation.

## Managed Delivery:

Managing internal compliance requirements, achieving a balanced and pragmatic security posture is often difficult for organisations with limited internal resources. Whilst business risks cannot be truly outsourced, SureCloud Risk Advisory provides an opportunity for organisations to outsource the management and delivery of key business processes and services to help release the burden on internal resources. Organisations will gain assurance that delivery is overseen by an appropriate expert, with any process or service improvements incorporated back into your operational environment.

## Specialist Advisory:

Organisations often have a range of niche operational and strategic initiatives, aligned to their business goals, that benefit from expert advice and support. SureCloud Risk Advisory has a range of specialist services that support and supplement an organisations security program and provide assurance that these will achieve their intended outcomes.
